1.0   Introduction

This documents describes the Dynamic Device Personalization (DDP) functionality supported by the Intel® Ethernet Controller X710/XXV710/XL710 starting with firmware version 6.01.

The DDP profile (0x8000000B) contains the X710/XXV710/XL710 parser graph for IPv4 Multicast .The IPV4 Multicast profile can be used to enhance performance and optimize core utilization for virtual network functions extensively processing IPv4 multicast traffic requiring separation of multicast and unicast IPv4 flows.
