Introduction

Sonata Switchboard is an application through which you can monitor in real time all the activity in your PBX. Here's how to configure Sonata Switchboard and all its benefits.

Sonata Suite is a set of programs that integrate with platforms based on Asterisk, below the list of these programs:

- SwitchBoard
- Call Accounting
- Recording Management System
- Call Center Reports
- Stats (Call Center Reports)
- Dialer

1. – Installation

In your VitalPBX go to Admin/Add-ons/Add-ons, select Sonata Switchboard and press the install button 2 shown in the Actions column. Wait a couple of minutes and then click the Sonata Switchboard link and start configuring.

1.1.- Press URL

Press the URL in the Add-ons list.

a.- The first step is to fill the following information

- **Database Host**, if you install Sonata Switchboard on the same server where the PBX is installed and the CDRs are stored, it is recommended to select "localhost", otherwise enter the remote IP or host.
- **Database User**, user to access the MySQL database administrator, is especially important as it is used to create Sonata Switchboard databases.
- **Database Password**, password to access the MySQL database administrator, is especially important as it is used to create Sonata Switchboard databases. In the case of VitalPBX the root user does not have a password.

b.- The second step is to fill following information

- **Description**, Description of the PBX to which we are going to connect the Switchboard.
- **PBX**, Type of PBX to which we will connect the Switchboard.

2.- Administration

2.1.- Connection

Sonata Switchboard connects to VitalPBX through a proprietary API, on this screen we can see the status of this connection and rebuild it in case something is wrong.

Go to Administration/Connection.
